DETAILED ACTION

This Office Action is in response to the filing of the application.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the first conductivity type third impurity region must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 2 discloses the source and drain having a diode structure in erasing. It is unclear what a diode structure in erasing is.

Claims 3,4 and 14-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter

Art Unit: 2822

which applicant regards as the invention. Claims 3,4 and 14-15 disclose a first impurity region formed on a "first layer" and a first conductivity type second impurity region formed inside first impurity region. It is unclear what or where the first layer is, is the first layer the substrate or the source/drain impurity regions. It is also unclear where the second impurity region is formed, is it formed on the substrate in the first impurity region or in the source/drain regions impurity regions.

Claims 5-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 5-11 disclose the second impurity region is "capacitively coupled" with floating gate and for writing data by injecting hot carriers. It is unclear how the second impurity region is capacitively coupled and what structure or element is used for writing data.

Claim 5 recites the limitation "second impurity region" in Page 43 line 16. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 12-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Wang et al. (U.S. Patent 5,572,054).

Art Unit: 2822

Wang discloses a non-volatile memory device (Fig. 1) that contains a p-type substrate (12), a first source/drain region (16) having a diode structure employed for controlling the potential of floating gate (22), a second source/drain region (14) formed to hold a channel region (18), a control gate (28) formed on channel region through a gate insulator film (20) with a thickness of 70-200Å and a tunnel insulator film (25) formed between control gate and floating gate with a thickness of 150-1200Å.
